

A HEALTHCARE FOR COMMUNITY

Civic participation and development of territorial healthcare

RATIONALE

Reference are “**2020 Standards for Health Promoting Hospitals and Health Services**”, mostly **Standard 3 “Enhancing people-centered health care and user involvement”** and the **Objective**: “The organization strives for the best possible patient-centered care and health outcomes and enables service users/communities to participate and contribute to its activities. “

In Piedmont, recently, the HPH Regional Conferences and the 2019 HPH Italian National Conference (hosted by Piemonte HPH in Turin) are focused on these issues.

In collaboration with Cittadinanzattiva, the most important Italian Association for the protection of citizens' rights, starting from 2018, particular attention is paid to the formation and launch of the Regional Chronicity Plan. The central topic is the development of territorial services supported by local communities and by informed civic participation.

Ministerial Decree 77/2022 "Models and standards for the development of Territorial Assistance in the National Health Service", collects this request and provides that the decree is implemented with:

“- the enhancement of co-planning with users;

- the enhancement of the participation of all community resources in different forms and through the involvement of the various local actors (Local Health Authorities, Municipalities and their Unions, professionals, patients and their caregivers, associations / organizations of the Third Sector, etc.),

This Conference, organized in collaboration with Cittadinanzattiva, will be dedicated to deepening the concrete links between the development of local services and civic participation and will be divided into three sessions.

The first will concern the assessment of the progress, in the Piedmont Region, of four crucial actions for the achievement of the objectives of Ministerial Decree 77/2022, namely:

1. The role of the Healthcare Districts for the development of home care in relation to the citizenry and local communities;
2. The start of the Territorial Operational Centers, for the promotion of home care, to be accompanied by constant monitoring in relation to active citizens and local communities;
3. The concrete organization of the Community Houses, supported by discussions with the communities, citizens and professionals of the area;
4. Individual Personalized Healthcare Plans agreed with the patients and their caregivers.

The second session includes a comparison between regional experience and national policies, with the presence of exponents of the Health Ministry and the National Agency Agenas.

The third session will include a reasoned overview of successful experiences in progress and already implemented.

DATE AND PLACE: October 13, 2022. Sala convegni "Il Centro in centro", Via Gallinari 10, Torino and in VDC.

ADVANCED PROGRAM
